Dolphin 3000

HIGH FLOW SYSTEM

Water Softener and Conditioner

BUILT TO LAST A LIFETIME!

WHAT'S INSIDE YOUR TANK?

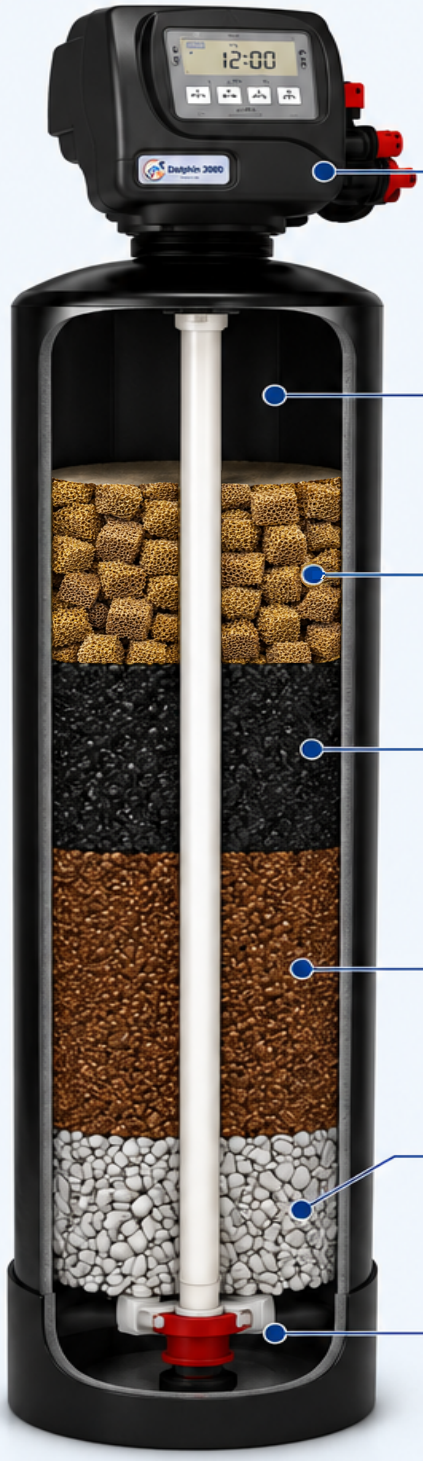

Our Dolphin 3000 High Flow System is designed with premium components that work together to deliver soft, conditioned water throughout your home while protecting your plumbing and appliances.

BENEFITS FOR YOU

- Protects your home and appliances from hard water damage
- Keeps clothes softer, brighter and lasts longer
- Cleaner dishes and spotless glassware
- Better skin and healthier hair
- Saves energy and improves the efficiency of your water heater
- Saves money on soaps, detergents and cleaning supplies

IMPORTANT TO KNOW

This system is designed for municipal water only. If your water comes from a well or other untreated source, additional treatment may be required.

TANK COMPONENTS AND THEIR PURPOSE

DIGITAL CONTROL VALVE

The brain of the system. It automatically regenerates (cleans) the tank based on your water usage, so you always have soft water without lifting a finger.

FREE BOARD SPACE

The empty space at the top of the tank allows room for the water to expand during regeneration, ensuring the system works efficiently and effectively.

SPONGE KDF MEDIA

High-purity Sponge KDF copper-zinc media reduces chlorine, controls bacteria and algae, and protects the system and your plumbing.

CATALYTIC CARBON

Premium catalytic activated carbon removes chlorine, chloramines, chemicals that cause bad tastes and odors, and improves overall water quality.

PREMIUM RESIN

The heart of the system. These tiny beads remove hard minerals like calcium and magnesium, giving you soft, conditioned water.

SUPPORT GRAVEL

Holds the resin in place and helps support the distributor system for better performance and longer life.

BOTTOM DISTRIBUTOR

Ensures even water flow during service and regeneration cycles for maximum efficiency.

BRINE (SALT) SYSTEM – HOW IT WORKS

The brine tank stores salt and creates a saltwater solution (brine). During regeneration, this brine is used to clean the resin by washing away the hard minerals and recharging it for more soft water.

SALT
Added to the brine tank

BRINE SOLUTION
Salt dissolves in water

REGENERATION
Cleans and recharges the resin
